

COLOUR CARD

Screen-printed tiles

Screen printing lets you combine many colours in a single installation. Each colour is printed by hand onto a white or cream base glaze, and the two merge in a second firing.

Any colour can be used on square and rectangular wall tiles, floor tiles and pocket tiles.

For projects above 20 m² (200 sq ft) we can also match a new colour.

Swatches are photographs, so colours vary by screen and printer. Ask us for a sample kit before you choose.
